

HOW TO USE THE WIFI

1. Connect your device to the WiFi we have running through the entire building
2. A login portal should appear. If it doesn't appear automatically then type **http://hello.wifi** into the address bar of your browser (*not into the search bar!*)
3. You will need an account to use our wifi.

At the bottom of the login portal you will find **TWO OPTIONS** for access...

Option one	Or	Option two
Quick Access - Perfect for single or short term use. Just choose a plan and go.		Personal - Create your own Account Name & keep forever. Top-Up the account when needed. Great for medium to longterm use. Rollover data!
Buy Now!		Create Account Top-Up Account

This is for instant **"one time access"**, For example if you are only here for a short time and just want an account quickly. Click [Buy Now!](#) Click the plan you want and you will be asked for your email address and payment preference. We support both Paypal and DPS. (Tip: DPS is a bit faster for credit card payments). Your access codes will be sent to you via email (please check your spam folder if you don't see the email in your inbox) Note: These accounts can not be "topped up". If you want to have an account for longer use, then please see option 2...

To use the service over a longer period, it is a good idea to create your own personal **"Month by Month" user account**. Setup is a one time process. You can then "top up" your account each month. This has the advantage of "roll over data" so if you don't use all your data in a month you can use it in the next. 😊 Click [Create Account](#) and fill in the form. Your confirmation will be emailed to you. (please check your spam folder if you don't see the email in your inbox) Now you have an account but you will need to add credit. Click [Top-Up Account](#) and login with your new credentials. Then click [RECHARGE ACCOUNT](#) and enter how many months you would like to pre-pay and then click **"Next"**

We support both **Paypal** and **DPS**.

(Tip: DPS is a bit faster for credit card payments). Just top up each month.

Now that you have an account you are ready to Sign in and use the service.

User	<input type="text"/>
Pass	<input type="password"/>
<input checked="" type="checkbox"/> Remember Me	
Sign in	Check or Topup

Your usage can be monitored by clicking on the [Check or Topup](#) button.

You can view how much data has been used and which devices have used it. (Note: Only OPTION 2 accounts can be topped up here.)

Please Note: This is a secure isolating public wifi.

For your security, no devices can see each other on the network. But this also means that devices like Chromecast cannot be used. To use shared devices securely you can either enable "WiFi sharing" on your smartphone OR you can get one of our Wi-Fibre personal wifi routers. Both of these methods will allow the sharing of our hotspot service to your shared devices.
